- Project Manager
- Human Resource Development Manager
- Sales Manager
- Sales Trainer
- Facilitator
- Engagement Manager

(Paul D. Tieger and Barbara Barron - Do What You Are)

However there are successful people of all types in all occupations. The key to getting where one wants to go involves firstly identifying what one really wants, something that comes from a more individual place than type. Individuals with ENFJ preferences then need to use knowledge of their type to gain insight into how they might approach the different activities in planning a career. In other words ENFJs need to build on the strengths of their type and address potential obstacles that may come along with their style as they explore options, connect with others, make decisions, and manage their careers.

Less Popular Careers for ENFJ

Every type is in virtually every career, and clearly people are drawn to careers for many reasons other than their type. People with ENFJ preferences are, however, less often attracted to careers and occupations characterized by a great deal of technical or tough-minded analysis and attention to detail, as in engineering or computer operations. They are also found much less often in careers that involve a great deal of interpersonal conflict (as in police or corrections work), business management (particularly if that work is not related to a people-oriented or service profession), or careers that have a low level of contact with people and/or a significant amount of hands-on precision work, as in many out-of-doors jobs, production/construction, and repair and maintenance jobs.

ENFJs who find themselves in-----or drawn to a----a career in which their type seems to be less frequent may want to read "Career Choices Where Your Type is Less Frequent".

(Charles R. Martin. Phd - Looking At Your Type "Your Career")

Popular Occupations for ESTJ's

However there are successful people of all types in all occupations. The key to getting where one wants to go involves firstly identifying what one really wants, something that comes from a more individual place than type. Individuals with ESTJ preferences then need to use knowledge of their type to gain insight into how they might approach the different activities in planning a career. In other words ESTJs need to build on the strengths of their type and address potential obstacles that may come along with their style as they explore options, connect with others, make decisions, and manage their careers.

Less Popular Careers for ESTJ

Every type is in virtually every career, and clearly people are drawn to careers for many reasons other than their type. People with ESTJ preferences are, however, less often attracted to careers and occupations that require a great deal of precision and logical analysis, or careers that are highly structured, such as careers in management, the military, or engineering. They are also found less often in careers that require work in isolation or careers that demand a great deal of routine hands- on manual or mechanical work, as in production or repair jobs.

ESTJs who find themselves in-----or drawn to a---a career in which their type seems to be less frequent may want to read "Career Choices Where Your Type is Less Frequent".

(Charles R. Martin. Phd - Looking At Your Type "Your Career")

Popular Occupations for ESTP's

www.drqamar.com

Popular Occupations for ESTP's

People with ESTP preferences are often attracted to and may find satisfaction in careers and occupations in the following areas:

Popular Occupations for ISFP's

- Translator/ Interpreter
- Aero plane dispatcher and air traffic controller
- Commercial air plane and helicopter pilot
- Fire fighter
- Farmer

Business

- Clerical careers: book keeper ,typist, legal secretary
- Administrator
- Insurance Examiner

(Paul D. Tieger and Barbara Barron - Do What You Are)

However there are successful people of all types in all occupations. The key to getting where one wants to go involves firstly identifying what one really wants, something that comes from a more individual place than type. Individuals with ISFP preferences then need to use knowledge of their type to gain insight into how they might approach the different activities in planning a career. In other words ISFPs need to build on the strengths of their type and address potential obstacles that may come along with their style as they explore options, connect with others, make decisions, and manage their careers.

Less Popular Careers for ISFP

Every type is in virtually every career, and clearly people are drawn to careers for many reasons other than their type. People with ISFP preferences are, however, less often attracted to careers and occupations that require a great deal of precision and logical analysis, or careers that are highly structured, such as careers in management, the military, or engineering. They are also found less often in careers that require work in isolation or careers that demand a great deal of routine hands- on manual or mechanical work, as in production or repair jobs.

ISFPs who find themselves in-----or drawn to a---a career in which their type seems to be less frequent may want to read "Career Choices Where Your Type is Less Frequent".
